TPC Transaction Processing
Performance Council

Agenda

- Benchmarking, standards & the TPC

- Challenges in ML\AI benchmarking

- TPC benchmark development goals & target usage

- TPCx-AI Key Features & Overview

- Summary

TPCx-AI Subcommittee

TPC Transaction Processing
Performance Council

What Makes a Good Benchmark?

TPCx-AI Subcommittee

Comprehensive
- ❑ Coverage (usecase, components)
- ❑ Reliable Proxy implementation
- ❑ Target usage

Usable
- ❑ Easy to use Kit
- ❑ Simplified Metric
- ❑ Support and Maintenance

Based on industry standards
- ❑ Peer Reviewed Specification and Code
- ❑ Public Availability
- ❑ Industry Acceptance

Flexible
- ❑ Adaptive
- ❑ Modularized
- ❑ Reusable

TPC Transaction Processing Performance Council

The Case for Standards and Specifications

Hardware Software value proposition

Technology value proposition

Meaningful, Measurable, Repeatable

Industry Standard Benchmark

Benchmark usage

- Performance Analysis
- Reference Architectures, Collaterals
- Influence Roadmaps and Features
- Aid Customer Deployments
- Illustrative ≠ Informative

Industry Standards

TPC

TPC Transaction Processing Performance Council

Transaction Performance Council(TPC)

- Mission

The Transaction Processing Performance Council (TPC) is a non-profit corporation whose mission is to develop data-centric benchmarks and to disseminate objective, verifiable TPC performance data to the industry.

- Background
  - The Transaction Processing Performance Council (TPC) was established in August 1988.
  - Distributes vendor-neutral performance data to the industry.
  - Vendors use TPC benchmarks to illustrate performance competitiveness for their existing products, and to improve and monitor the performance of their products under development.
  - Current Benchmark standards:
    - TPC-C, TPC-E, TPC-H, TPCx-BB, TPCx-IOT, TPC-DS TPCx-HCI, TPCx-HS, TPCx-V
  - Specifications consistent across all benchmark standards
    - TPC-Energy Specification: Augments existing TPC benchmarks with energy metrics
    - TPC-Pricing Specification: Single pricing specification ensures prices used in published results are verifiable

TPCx-AI Subcommittee

TPC Transaction Processing Performance Council

Challenges in ML\AI Benchmarking

Lack of diversity across several dimensions:

- Data types (textual, numerical, audio, image)
- Problem class (supervised, unsupervised)
- Method (classification, clustering, regression, Deep Learning vs ML)
- Complexity (simple, complex tasks)
- Scale

No representative benchmark emulating end-to-end datascience pipelines

Lack of AI production ready, commerically available solutions

Lack of comparability across platforms & solutions

- No Unified Primary Metric, Price Performance metric and Energy metric

AI innovation continues at rapid pace

TPCx-AI Subcommittee

TPC Transaction Processing Performance Council

TPC Benchmark Development Goals

Build an industry standard that represents key AI use case(s) relevant in today's Datacenter and Cloud

Allow publication and audit of TPC results based on commercially available AI solutions.

Keep current with industry trends in AI and update the standard specification and\or implementations accordingly.

TPC Transaction Processing Performance Council

Contributors

TPCx-AI benchmark standard usage

The standard addresses the needs of:

- Technology providers
  - Hardware innovators
  - Software solutions and services
- Companies adopting AI to:
  - Compare Performance, price performance, TCO
  - Improve existing deployments
- Academia and Research
- Vendors wanting to benchmark on large realistic datasets

TPC Transaction Processing Performance Council

TPCx-AI: Key Features

First Industry Standard benchmark emulating representative end-to-end Data science pipelines

7 Machine Learning & 3 Deep Learning use cases (Version 1.0.0) – Retail Datacenter

Framework Agnostic

2 implementations in the kit (commercially available Scikit-Learn and Spark). Use either one

Unified Primary Metric

Ability to Scale to large datasets

Priced configurations for TCO

TPC Transaction Processing Performance Council

Benchmark Standard Overview

Implementation

- Self Contained Kits
- Scikit-Learn implementation
- Spark implementation
- Use either implementation to publish
- 10 Machine learning & Deep learning use cases

Kit Features

- Easy setup
- Dataset size and Concurrency Scaling
- Versatile
- Modular Driver to support Future APIs

Availability

- TPCx-AI Version 1.0.0
- Download from the TPC website (www.tpc.org)
- Open to contributions

URL: TPCx-AI Homepage

TPC Transaction Processing Performance Council

TPCx-AI: Data Model

	Customer Images	Audio Conversation	
Order Returns	Order	Customer	Financial Account
Store Department	Lineitem	Marketplace	Financial Transaction
Failure Logs	Product	Product Rating	Product Reviews

Structured

Unstructured

Unified Schema

- Inspired by real-world dataset schemas
- Data types
  - Text –Logs, Structured
  - Audio Conversations
  - Images
- Scaling and non-scaling Tables
- Parallel Data Generation

TPC Transaction Processing Performance Council

TPCx-AI: Kit Implementation

Scikit-Learn Single node

python

NumPy | K Keras

Pandas | TensorFlow

Dlib | OpenCV

Linux

Hardware

Spark - Scale out

python | Scala | Java

Horovod

Spark

TensorFlow | YARN

Dlib | OpenCV

HDFS

Linux

Hardware

Scikit-Learn implementation

- For smaller datasets
- For smaller hardware configurations
- Uses Sci-kit Learn, Python, Pandas, Keras, Tensorflow, etc.

Spark implementation

- For very large datasets
- clustered configurations
- Uses Spark, pyspark, Horovod, Tensorflow, etc.

Use case # mapping

- Machine learning - 1, 3, 4, 6, 7, 8, 10
- Deep learning – 2, 5, 9
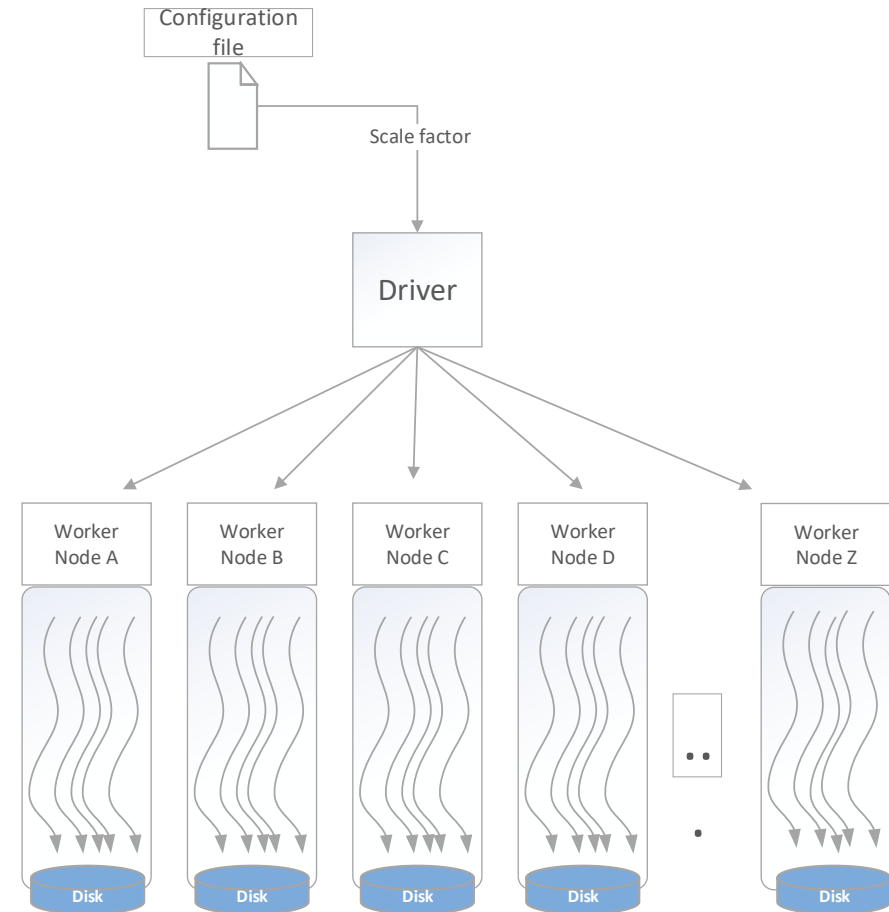

Flexible & Modular

- Ability to tune parameters
- Flexibility for optimizing data load, training & inference
- Can use other commercially supported SUT software implementations

TPCx-AI: Benchmark Workflow

TPCx-AI Subcommittee

Cluster Setup	Define Parameters	Run Benchmark	Analyze Data	Results

Cluster Setup
- ✓ **Min 1 Node – Python**
- ✓ **Min 3 nodes - Spark**
- ✓ **Concurrent Streams 2-n**

Define Parameters
- ✓ **Scale Factor up to 10000GB**
- ✓ **Tuning Parameters for Training and Serving Tests**

Run Benchmark
- ✓ **Data Generation**
- ✓ **Load Test,**
- ✓ **Power Training Test,**
- ✓ **Power Serving Tests,**
- ✓ **Scoring Test,**
- ✓ **Throughput Test**

Analyze Data
- ✓ **Reports**
- ✓ **Metrics**
- ✓ **Utilization**

Results
- ✓ **Publication**
- ✓ **Collateral**
- ✓ **POC**

**TPC** Transaction Processing Performance Council

Benchmark Driver and Data Generator

- The benchmark includes a parallel synthetic data generator.

- The Driver reads multiple settings and user input parameters from configuration files or the command line.

- The scale factor (SF) is a configuration parameter specified by the user. It sets the target input dataset size in GB. E.g SF=100 equals 100GB.

- The driver spawns multiple data generation threads across all worker nodes in the cluster to quickly generate the amount of data specified by the SF.

- The synthetic data generator is capable of generating datasets of varied sizes (From Gigabytes to Terabytes) while maintaining the main characteristics of the dataset as a whole.
15

Benchmark Test Run

Training Dataset ⟵ Generate Data at SF ⟶ **Serving Dataset**

Load Data/ Ingest	Power Training Test	Power Serving Test 1	Power Serving Test 2	Model accuracy measurement	Throughput Test

T_{LD}=Load time

- T_{PTT}=Geomean of training times
- T_{PST1}=Geomean of serving times
- T_{PST2}=Geomean of serving times
- T_{TT}=Total elapsed time / (#streams* # of use cases)

$$T_{PST}=Max(T_{PST1},T_{PST2})$$

Performance Metric: AIUCpm@SF$=\dfrac{SF*N^{*}*60}{\sqrt[4]{T_{PTT}*T_{PST}*T_{TT}*T_{LD}}}$

*N=Number of use cases

16

TPC Transaction Processing Performance Council

ScaleFactor, Streams & Metrics

Terabytes

1GB

stream1	uc3	uc5	uc10	:	:	uc2
stream2	uc1	uc4	uc5	:	:	uc8
...						
Stream n						

AI Use cases per min @ SF

$ / AI Use Cases per min @ SF

Data & Scale Factors

- Data scales to Terabytes
- Diverse Dataset (Audio, Images, Text)
- Real world representative dataset

Streams

- Easy setup
- Dataset size and Concurrency Scaling
- Flexibility to show performance leadership
- Demonstrates TCO

Metrics

- Primary Metric
  - Includes time to load, manage data, train & serve
- Price Performance Metric
  - $/Primary Metric

TPC Transaction Processing Performance Council

TPCx-AI: Future developments

- AI innovation continues at a rapid pace
  - TPC will continue to keep pace

- Modularity in benchmarking is key
  - TPC plans to include new use cases in future versions
  - continue to modularize key stages

- Inclusion of additional stages
  - TPC will continue to develop additional stages for future versions

TPCx-AI Subcommittee

TPC Transaction Processing Performance Council

Summary -TPCx-AI: A Big Step...

- Representative key production ML\DL use cases

- Benchmarks end-to-end data science pipelines
  - essential in today's ML\AI environments

- Benchmark standard can scale a diverse and representative dataset

- Provides Price performance & overall AI solution TCO for published results
